PROFILE

Software engineer building production LLM agents and Python backend systems at Chat360, following two years of full-time DevOps/SRE work at Cleartrip. Combines agent orchestration and retrieval with infrastructure, observability and billing.

TECHNICAL SKILLS

Backend: Python, Go, JavaScript/TypeScript, SQL; Django/DRF, asyncio, Celery, REST APIs
AI & data: LangGraph, LangChain, OpenAI/Azure OpenAI, RAG, Qdrant, Pinecone, PostgreSQL, Redis
Infrastructure: GCP/GKE, Terraform, Docker, Kubernetes, Jenkins, GitHub Actions, Langfuse, ELK, New Relic

PROFESSIONAL EXPERIENCE

Agentic AI Engineer — Mar 2026 – Present

Chat360 (Sumanel Technology Ventures) | *Pune, India*

- Enabled parallel tool execution in the agent runtime using thread pools; added token-aware conversation history truncation.
- Implemented Pinecone-to-Qdrant migration APIs and batch transfer workflows; updated retrieval and vector-store integrations.
- Built Club Mahindra's Maya RAG pipeline, semantic resort search, live availability checks and resort-ID verification for booking workflows.
- Implemented idempotent session-close billing reconciliation and optimized AI Insights data retrieval; added complexity-based routing to lighter models.
- Migrated Langfuse tracing and callback handling across webhook and LangGraph supervisor paths.
- Fixed DBHub cross-session writes and per-table save state; moved background synchronization to retryable Celery tasks.

Software Engineer (DevOps / SRE) — Jun 2021 – Jun 2023

Cleartrip (Flipkart Group) | *Bangalore, India*

- Managed GCP/GKE infrastructure with Terraform; authored VPC design documentation for PCI/non-PCI networks, firewall rules, disaster recovery and observability.
- Supported QA migration to GCP and deployment pipelines; tuned Elasticsearch for high-traffic sales and rolled out hotel-service Kibana logging.
- Handled production on-call troubleshooting and cost optimization; integrated Snyk and set up Debezium.

Software Engineer Intern — Mar 2020 – May 2021

Cleartrip | *Bangalore, India*

- Automated deployments with shell scripts, supported QA/staging infrastructure and debugged DNS/HTTP connectivity; converted directly to full-time employment.

SELECTED PROJECTS

kgmail & **kgssh** | Go · MCP — 2026
Built a multi-account email manager with a native Go MCP server and an SSH launcher CLI; distributed both through Homebrew.

writehere-agents | Python · LLMs — 2026
Built a recursive DAG-based framework that decomposes prompts into structured subtasks and executes them to produce multi-section outputs.

Irrational Agents — MSc Capstone | Python · LangChain · Phaser — 2024 – 2025
Led the simulation frontend; contributed the socket API, prompts and agent behavior/personality layer in a team project on Azure and GCP Cloud Run. Distinction (80).

Signature-forgery detection | PyTorch · Transformers — 2023
Fine-tuned a Vision Transformer for genuine/forged signature classification; published the model and training results on Hugging Face.

EDUCATION

Master of Computer Science — Jul 2023 – Jul 2025

University of Wollongong, Australia

Major: Machine Learning and Big Data and Software Engineering · WAM 71.7. High Distinctions: Programming & Data Structures (93), Web Development (91).

Bachelor of Engineering — Computer Science & Engineering — Aug 2017 – Jun 2021

Chitkara University, Himachal Pradesh, India

CGPA 9.16/10 · Cleartrip internship credited as final-year co-op training.
